Document Purpose and Audience:

This Software Design Specification document shows the design of the booking system of GOFO project in detail. This document will offer the software engineers a framework through providing general designs , sub systems and interfaces. This will happen through viewing the class diagrams , sequence diagrams and state diagrams we will make

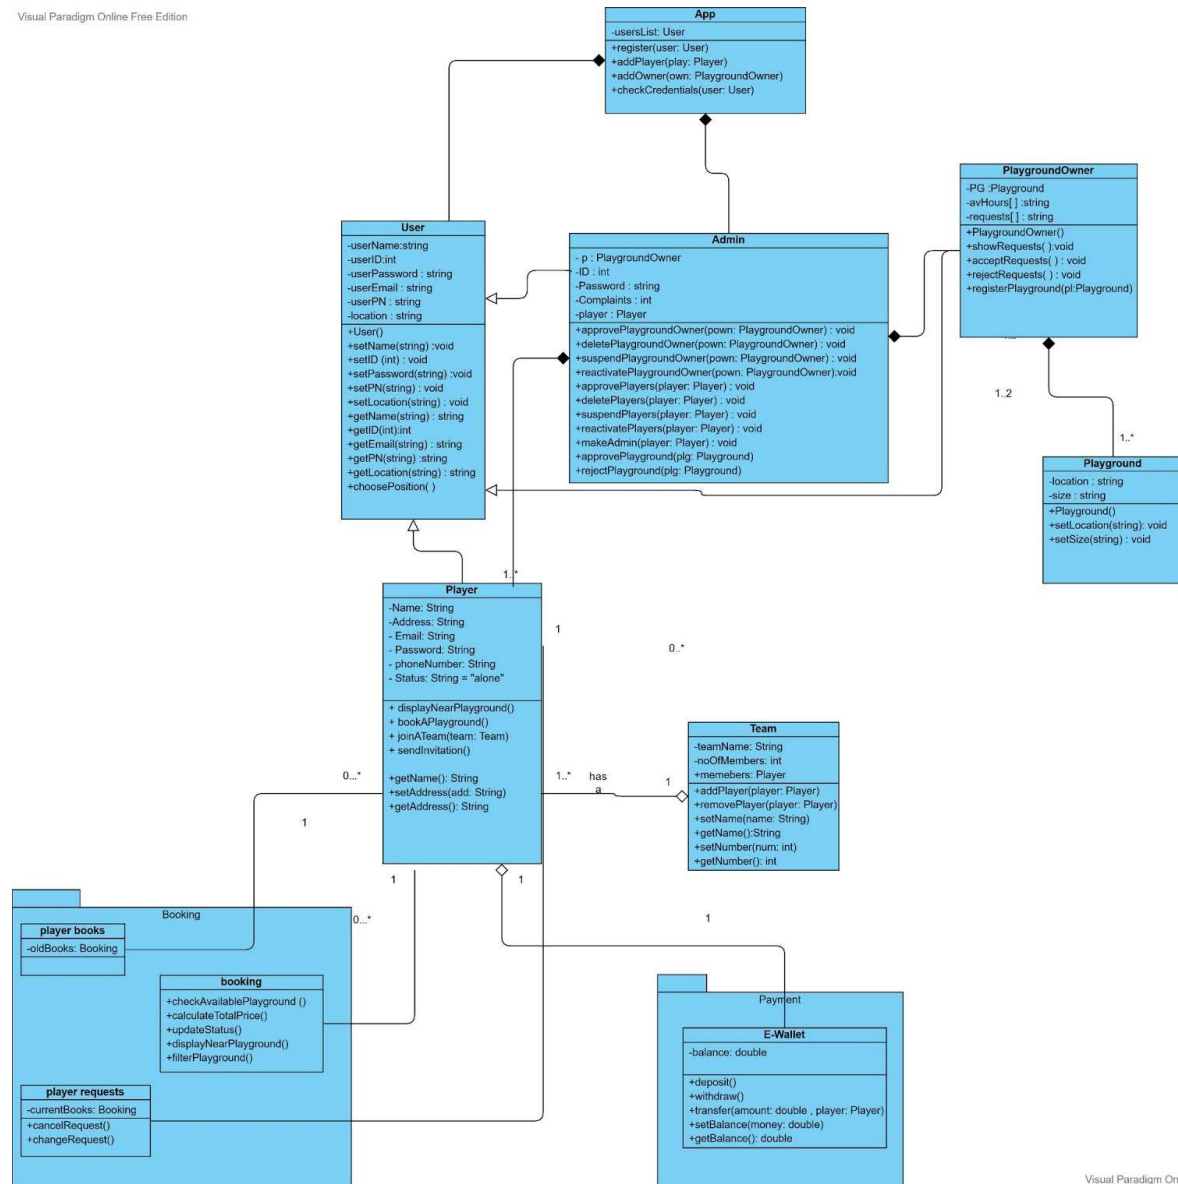

The intended audience will be :

- 1- The stakeholders
- 2-Software Development Team
- 3- Our Actors : Administrator , Player and Playground Owner

System Models:

II. Class Descriptions

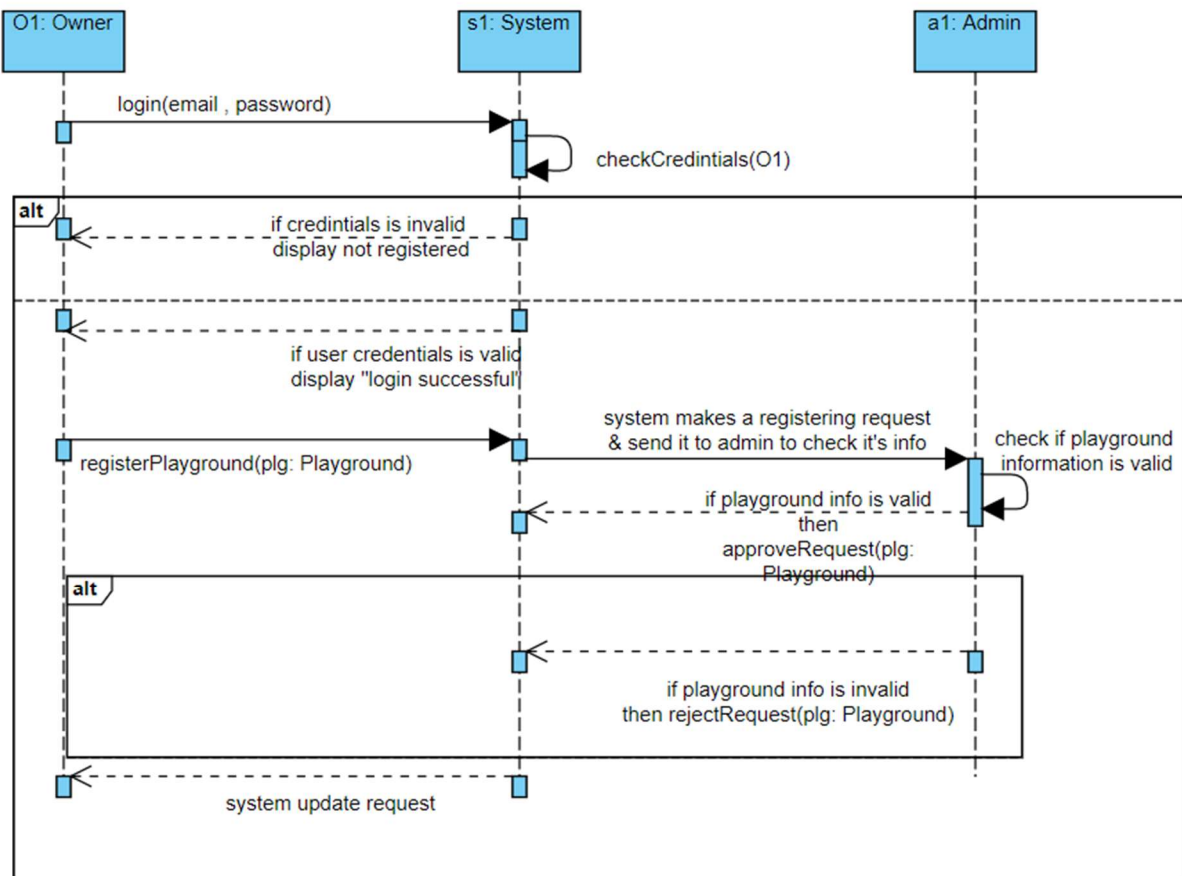

Class ID	Class Name	Description & Responsibility
1	System	<p>This class is about the system</p> <ul style="list-style-type: none"> • register • add player • add owner
2.	Admin	<p>This class is about the admin and what we can ask of him and what he can do regarding the other classes , this class has an object of the Playgroundowner and user classes</p> <ul style="list-style-type: none"> • Approve playground owners or players • Suspend playground owners or players • Delete playground owners or players • Reactivate playground owners or players • Make a user an admin
3.	User	<p>This class is about the user before he decides if he is a player or playground owner</p> <ul style="list-style-type: none"> • Sets a name , id , password, email , PN and location • Gets name , id ,email , PN and location
4	Player	<p>This class is about the user after he decided that he is a player</p> <ul style="list-style-type: none"> • Join a team • Book a playground • Look at nearby playgrounds • Send an invitation
5	Playground Owner	<p>This class is about the user after he decided that he is a playground owner</p> <ul style="list-style-type: none"> • Show requests • Accept requests • Reject requests
6	Playground	<p>This class is about playground owner after he has been approved by the admin and has a playground</p> <ul style="list-style-type: none"> • sets location and size
7	Team	<p>This class is consisted of a number of player at most 18 players</p> <ul style="list-style-type: none"> • set name and number • get name and number • add player • remove player
8	E-wallet	<p>This class is about the way the players pay for the booking of playground and all players and playground owners have different e-wallet</p> <ul style="list-style-type: none"> • set balance • get balance • deposit • withdraw • transfer
9	Booking	<p>This class is about the booking process that the player goes through</p> <ul style="list-style-type: none"> • check available playground • calculate total price • update status • display near playgrounds • filter playgrounds

III. Sequence diagrams

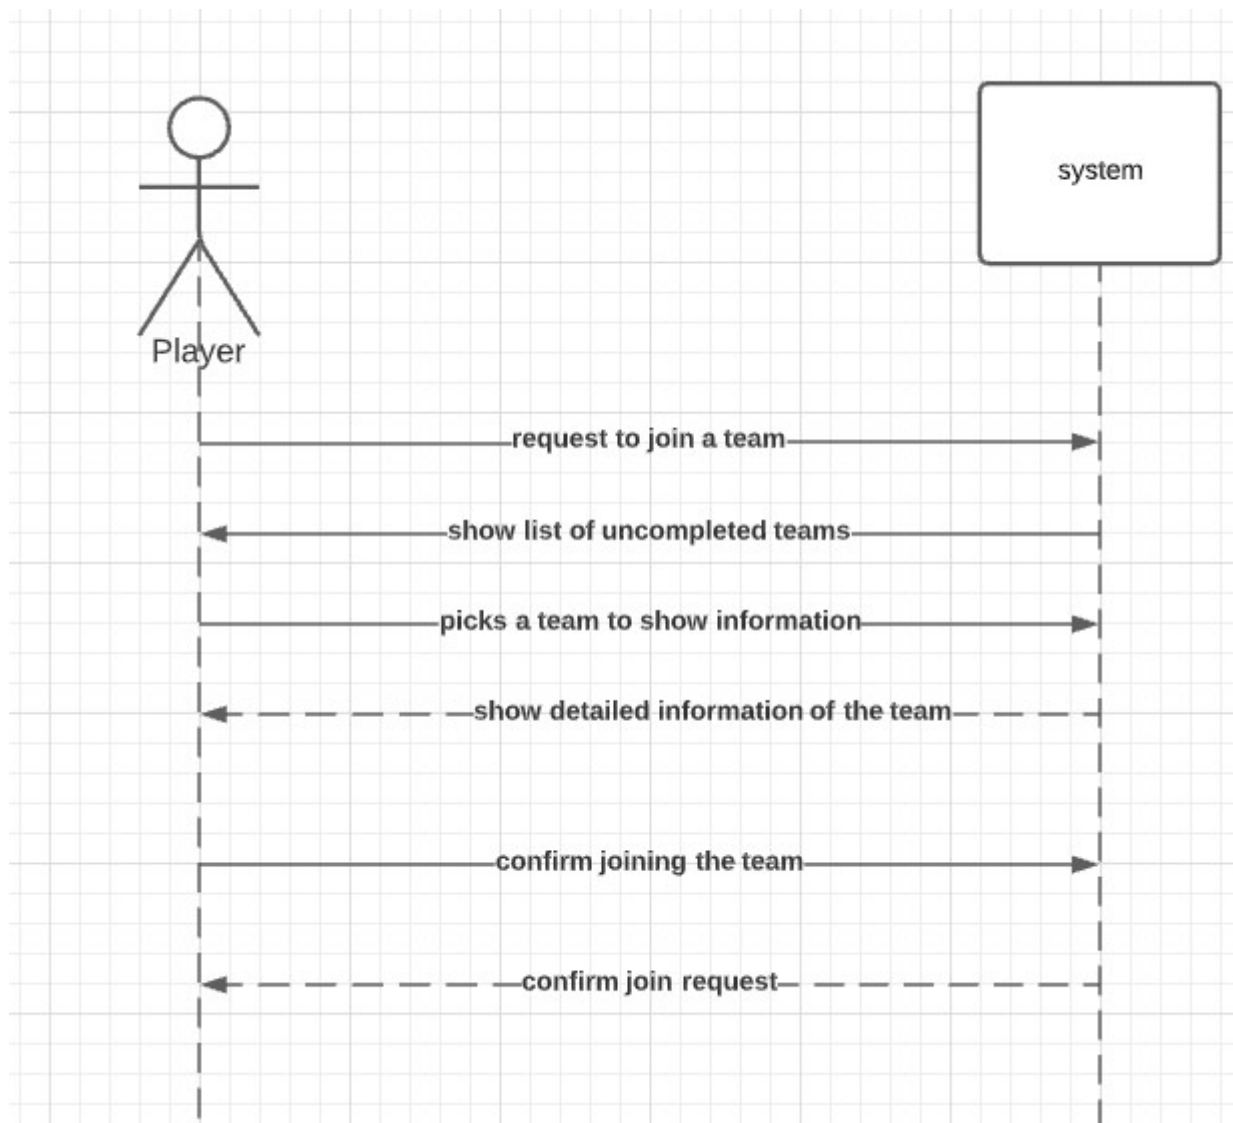

1- user register on the system:

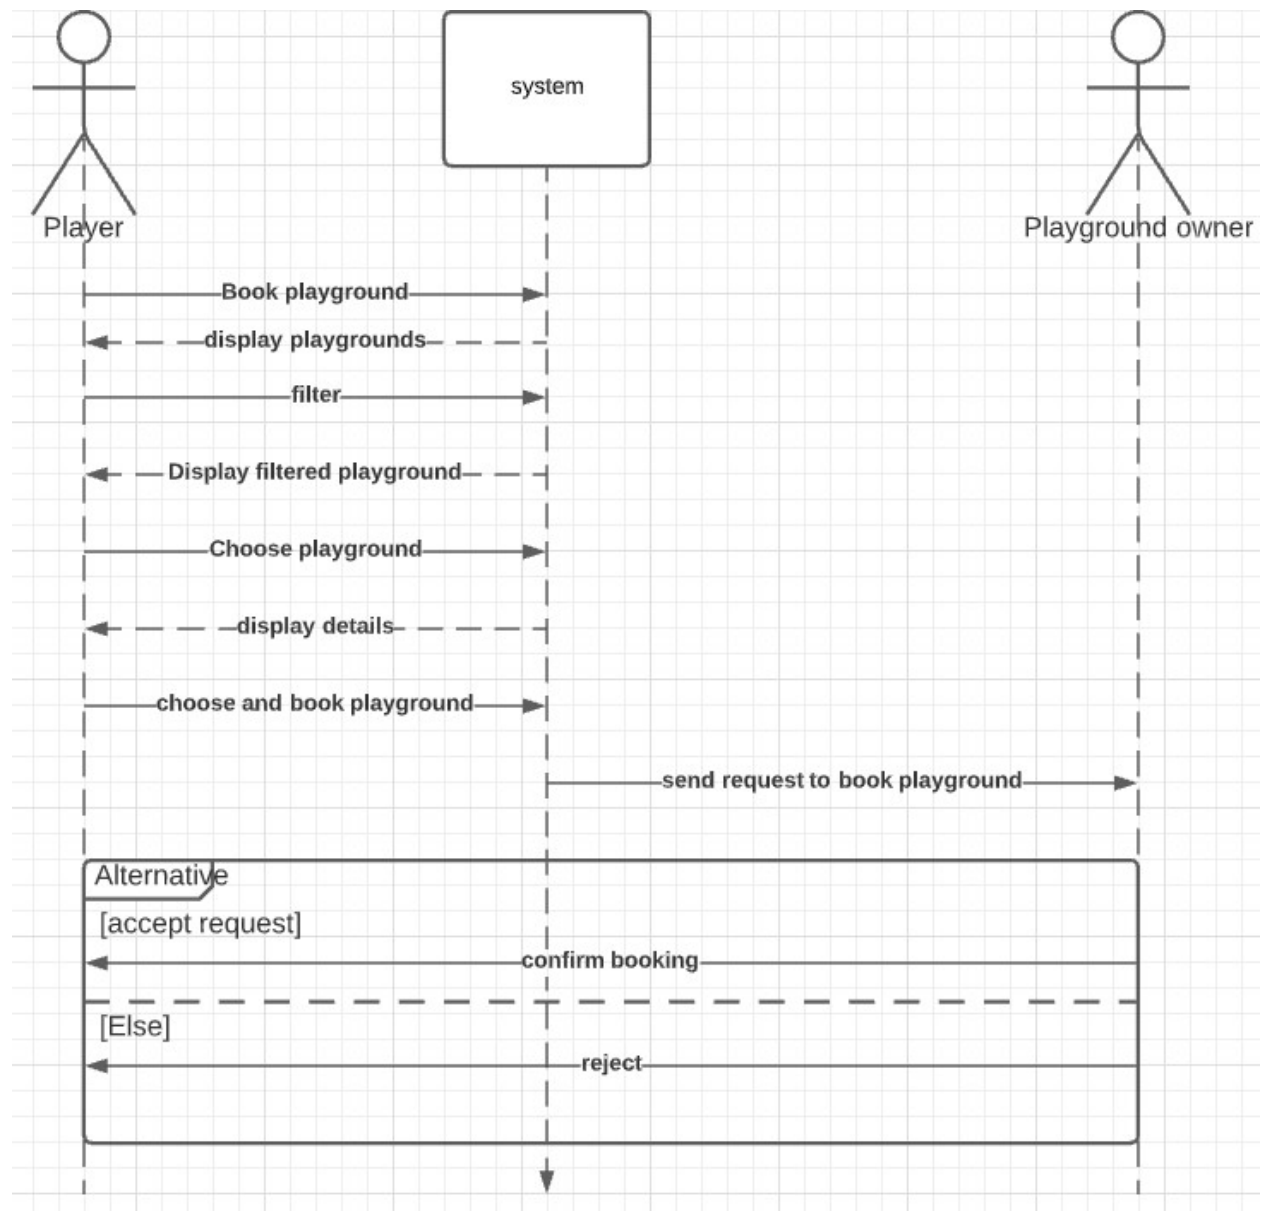

2- owner register a playground:

3- player join a team:

4- player register a playground:

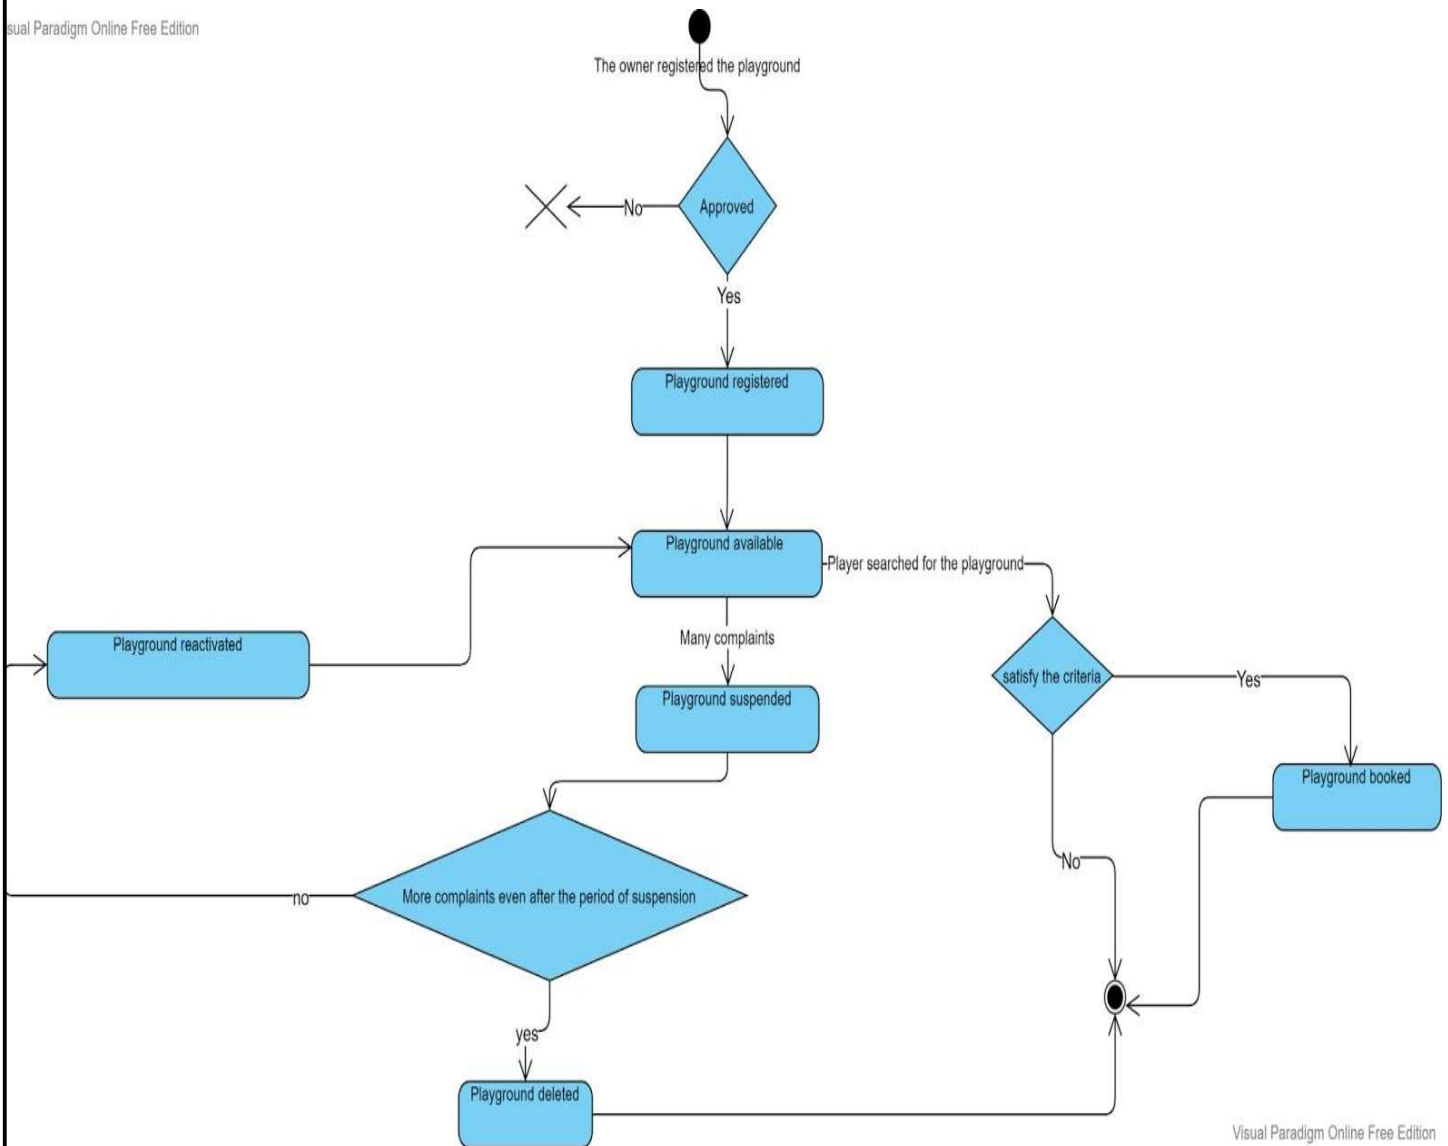

Class - Sequence Usage Table:

Sequence Diagram	Classes Used	All Methods Used
1- user register a playground	Class User Class System Class Player Class Playground owner	Methods User.register() Methods User.addPlayer(play: player) Method User.addOwner(own: PlaygroundOwner)
2- owner register a playground	class Owner class System class Admin	method: Owner.login(email: String , password: String) Owner.registerPlayground(plg: Playground) method: System.checkCredentials(u1: User) method: Admin.approveRequest(plg: Playground) Admin.rejectRequest(plg: Playground)
3-player book a playground	player playground owner playground	displayNearPlayground() showRequests() acceptRequests()
4-player join a team	player	joinATeam()
